

Jiyul Ahn

Software engineer — internal tools and operations software

jiyul.ahn@stonybrook.edu
+1 631 406 0295
+82 10 8685 9042
Stony Brook, New York

I build software for teams that don't have a developer — usually replacing a spreadsheet, a paper form, or a procedure only one person in the room knew. The work runs from schema design through the screen to deployment, sitting next to whoever has to use it.

In progress	Education	
	Stony Brook University	B.S. Computer Science
	Currently enrolled. Studied at SUNY Korea, the university's Incheon campus, through spring 2026.	
Mar 2026 – Jun 2026	Skills	
	Languages	TypeScript, JavaScript, Python, PHP, SQL
	Frontend	React, Tailwind CSS
	Data	PostgreSQL, Supabase (Realtime), document stores
	Platforms	Odoo, Cafe24
Mar 2025 – Mar 2026	Experience	
	Korea Polar Research Institute	Research intern, paid — Life Sciences Research Division
	- Built an offline tool for internal use; under NDA. - Credited afterwards as a co-author on the paper the work fed into, <i>Directed Immobilization of an Engineered Ice-Binding Protein (ABP-eCoIBD1) on Aluminum Surfaces for Anti-Icing Performance</i> (supplementary material, in draft as of September 2026).	
Jun 2025 – Nov 2025	B2B export infrastructure	Developer — one-year contract
	- Matched domestic sellers with overseas buyers and moved customs and shipping paperwork off email and WhatsApp onto an automated platform. - A shipment carries more than ten documents, each owned by a different party, and a stuck one blocks the next. So I split the model: transactions stayed relational and deliberately dull, while behavioural data went to a document store where volume doesn't matter. - Shipped inside the window and was used in production for the full contract, which ended in March 2026 when the operation moved onto a different stack.	
	SQL	Document store Customs and shipping flow
Apr 2023 – Dec 2024	DX Tech	Odoo project manager, Incheon — six-month contract
	Scoped the steps still running offline in logistics customs clearance, then designed and built a customised Odoo product around them.	
	Odoo	Python Scoping
	BADA	Developer, Cheonan
	Every student application ran on paper, so I moved the process to the web: PHP, HTML and JavaScript, mobile and desktop layouts, server configuration, deployed on Cafe24.	
	PHP	JavaScript Cafe24 Responsive layout

Oct 2025 –
Present

Projects

SeekOnce

Project lead, now running it independently

- Academic planning platform for Stony Brook and SUNY Korea students, with sign-up limited to the @stonybrook.edu domain. Reached 100 subscribers in its first 20 days; currently on v3.7.1.
- One upload drives the whole product: a transcript feeds GPA simulation, curriculum pathways, remaining requirements, anonymous course reviews, and a timetable that overlays on friends'. About twenty Postgres tables hold it up.
- Started as a twelve-person Decompiler × LAMBDA club project and went independent in January 2026. Moving from polling to Supabase Realtime took a weekend and removed the timetable's thirty-second lag between two people on the same screen.

TypeScript React Postgres Supabase Realtime

Jan 2024 –
Sep 2024

Facility booking service

Solo project

- Booking site for school facilities, built and then operated for the high schools using it.

Awards and certifications

Jul 2026

CODEGATE 2026 AI Startup Hackathon

1st place — \$15,000 prize

- Led product planning and gave the final pitch: proposed the idea, wrote the PRD, split the work across the team. We pitched a platform that captures what small manufacturers know before the people holding it retire, and built the shared database behind it.

Mar 2026

Odoo Project Leader Ownership

Certification

- Completed Odoo's PLO course, which carries access to the Odoo Enterprise inner repository.

Nov 2025

2nd Incheon University Startup Academy

Best Idea

- Entered as SPIKE. Chosen out of all participants to present on behalf of the entrants, in front of the mayor of Incheon at the time.

Jun 2025

12th K-Digital Challenge NET Challenge Camp

Outstanding team

- Selected as an outstanding team, with follow-on support, in the AI and network applications idea contest.

Leadership and activities

Jan 2025 –
May 2026

Decompiler

Student club, SUNY Korea

- Technical advisor in spring 2025, vice president that fall, president in spring 2026. Starting a Decompiler chapter at Stony Brook in the fall 2026 semester.

May 2026

Hackathon the X 2026

Event lead — hosted and organised by Decompiler

- Ran the event end to end on 30 May 2026 on the theme of digital transformation: outreach, venue and facility rental, and the whole preparation and execution process.

May 2026

UROP Showcase

Presenter — hosted by the Computer Science Department

- Presented at the Undergraduate Research Opportunities Program showcase on 26 May 2026.

Sep 2025 –
Dec 2025

AI literacy mentoring

Mentor, paid — programme commissioned by an office of education

- Taught AI literacy through the fall 2025 semester.

Nov 2025

2025 Green Digital Trade Ideathon

Event lead — hosted and organised by Decompiler

- Planned and ran the whole event — speakers, judges, student recruitment, posters, facilities and catering — while delegating the other executive roles.
